### **SICHERHEITSMITTEILUNG** für Sicherheitsautomaten

herausgegeben: 01.11.2011  
Nummer: 13/2011

Bezug: **EMERGENCY PRODUCT SERVICE BULLETIN PSB 08**  
**(Ergänzt das Product Service Bulletin PSB-7)**  
**(Ersetzt das Product Service Bulletin PSB-6)**

Betroffene Muster: Vigil mit einem Cutter von vor 6/2008

Status: **verpflichtender Ausbau der betroffenen Cutter**  
**vor dem nächsten Sprung!**

Betrifft: Cutter mit der Teilenummer 9582006 Baujahr 10/2007 und bis 6/2008

Grund: auf Grund von Produktionsfehlern ist in einem Cutter der angegebenen Serie kein Messer eingebaut gewesen.

Maßnahmen: die betroffenen Cutter von 10/2007 sind vor dem nächsten Sprung zum Hersteller zu schicken. Diese Cutter tauscht der Hersteller kostenlos aus. Den Hersteller bitte vor Rücksendung kontaktieren. Er informiert dann über die Rücksendung und gibt alle nötigen Anweisungen.  
**Zusätzlich sind alle Cutter mit Baujahr danach bis 6/2008 unbedingt mit dem beschriebenen Test über einen Magneten zu prüfen !!!!!!!!!!!!!!!!!!!!!!!**

Durchzuführen bis: **Vor dem nächsten Sprung!**

Bemerkungen: Alle Cutter ab Baujahr 2008 wurden vor dem Einbau mittels Röntgenaufnahme überprüft.  
Der Hersteller hat einen Feldtest entwickelt, indem man das Vorhandensein des Messers im Cutter mit Hilfe eines Magneten überprüfen kann.  
Wurde der Cutter gewechselt oder der Test erfolgreich durchgeführt, bitte auf der Begleitkarte den Vermerk "vigil-SB-8 - OK"  
Anhang: die PSB 07 und BSP 08 vom Hersteller

Verteiler: Techniker, Warte, Händler, Vereine, Sprungzentren.

Dresden, den 01.11.2011

Chris Buß - Referat Technik DFV

**EMERGENCY PRODUCT SERVICE BULLETIN**  
**(Supersedes Product Service Bulletin PSB-7)**

**Issue Date** : **October 20, 2011**

**Bulletin Number** : **PSB-8**

**Subject** : **Vigil Cutters**

**Compliance** : **Mandatory**

**Identification:**

Vigil AAD, All Cutters produced in October 2007  
Part Number: 9582006  
Date of Manufacture: 10-07 (**mm-yy**)  
(See Photo 1.)

**Background:**

This SB-8 revises SB-7 to include additional serial numbers (see list B) and to add additional guidance for compliance requirements.

The following incident occurred on the 14th September 2011 at the Saint-Jean Chrysostome (Canada) drop zone:

A skydiver failed to deploy his main canopy and manually pulled his reserve handle with insufficient altitude to fully deploy the reserve canopy. During the investigation of the incident it was discovered that the loop was neither cut nor trapped by the cutter.

## **Compliance:**

In the preliminary report prepared by the Royal Military Academy, it was stated that the knife blade was missing. (See the separate Royal Military Academy report.)

Vigil R&D has confirmed that the electronics worked correctly and fired the cutter, but because of the absence of the knife blade, the closing loop could not be cut.

The manufacturer of the cutter assembly has confirmed that the failure to install the knife blade was caused by error during the cutter assembly process. This appears to be an isolated batch. We are not aware of any similar assembly failure in any other batch of cutters which the cutter assembly manufacturer has produced for any of their other customers, including NASA and the US Armed Forces.

A group of 15 cutters from that batch have been activated by the Royal Military Academy for test purposes, and all worked to according to specifications. (See the separate Royal Military Academy report.)

**The cutter was part of a production batch of 299 pieces, produced in October 2007. (See Photo 1.) In the interest of safety, AAD has decided to recall all cutters from the October 2007 cutter batch and to replace all of those cutters free of charge.** The removed cutter must be returned to AAD sa/nv or Vigil USA, LLC once the replacement cutter has been received. (Please contact AAD sa/nv or Vigil USA, LLC for return information and instructions.) This will enable us to personally examine and analyze as many cutters as possible from this batch in order to verify that this, in fact, has been an isolated incident.

**Photo 1**

**DOM : October 2007**

**Even though the production batch only included 299 pieces, Vigil has identified additional Vigil serial numbers (see list B), from those stated in PSB-7 (see list A), on which the affected cutters might have been installed and has included the additional Vigil serial numbers in this PSB-8. The list provided in this PSB-8 replaces the previous list and must be used for reference, however it is essential that any cutter with a Date of Manufacture ("DOM") of 10-07 be replaced, regardless of whether or not the Vigil serial number is on the list.**

## **Magnet Test Procedure:**

In the interest of additional safety, we have devised a field test, which can be performed on any Vigil cutter, using a magnet to confirm the presence or lack of a knife blade. It can be done using any magnet on any cutter. Either a small (see Photo 2A) or a larger (see Photo 2B) magnet may be used. You must ensure that the magnet is placed directly below the closing loop hole portion of the cutter, as shown in Photos 2A and 2B. If there is a knife blade present, the magnet will be attracted to the knife blade. If you require a magnet they are available on request from AAD sa/nv or Vigil USA, LLC.

**2A**

**2B**

**Photo 2  
Magnet Test Procedure**

Note: All Cutters manufactured from June 2008 have been x-rayed as part of our quality control process, and we have confirmed that the knife blade is present, however for additional safety, we highly recommend that the magnet test be performed on each cutter manufactured prior to June 2008.

**Once compliance with this bulletin has been met, and, if necessary, the 10-07 cutter has been replaced, or a cutter with a manufacture date prior to 06-08 has been tested with a magnet and it has been determined that a cutter is present, or it has been determined that the cutter DOM is 06-08 or later, the reserve parachute packing data card should be marked with "Vigil SB-8 - OK."**

## **Compliance Date:**

**Because of the seriousness of this matter, this Emergency Product Service Bulletin must be complied with before the next jump on all Vigils with the following serial numbers** (See List A and B below, which identifies the affected Vigils by the original gold Q.C. hologram numbers.) **Please note that this list is not exhaustive since some cutters may have been removed from the original Vigil for which they were provided and may have been used, without our knowledge, as replacements on other Vigils.** Some cutters may have a silver hologram because they were issued for stock or as replacements via our dealers. Therefore, verification of the Date of Manufacture ("DOM") of the cutter must be performed at the time of the next reserve repack. **Every cutter found with a DOM of 10-07 (see Photo 1) must be replaced before the next jump, and the cutter which was removed must be returned to Vigil.** (Please contact AAD sa/nv or Vigil USA, LLC for return information and instructions.)

**List A: Serial numbers of Vigils with cutters manufactured in 10/07**

## **Distribution of this Emergency Product Service Bulletin shall include, but is not limited to:**

- All identified owners of Vigil Cutter with a manufacture date (“DOM”) of 10-07 (to be notified by and through our dealers).
- All AAD dealers.
- Parachute Industry Association.
- All identified parachuting publications.
- All identified parachuting Federations and Associations
- All National Aero Clubs, Parachuting Section.
- IPC Technical Committee.
