To whom it might concern,

Sunrise Manufacturing International, Inc. does not foresee any problems with a one-year (365 days) repack cycle on all Skydive Wings products including the Wings Classic, Wings Vision, and Wings Student Container systems.

Regardless of the above statement, the 3-ring system should be inspected, cleaned and lubricated on a regular basis while in use, the rest of the H/C system should be visually inspected before use by the jumper for wear and tear on the system and external components.

If any damage or wear is found, the H/C should not be jumped until further inspection by a qualified and certified parachute rigger.

The H/C & Reserve assemblies should also be stored in a climate-controlled environment when not in use for extended periods.
