

### 7.4.1 Using the Optional Semi-Stowless Deployment Bag.

The **Wings Semi-Stowless Main Deployment Bag** uses either Elastic Stow Bands or regular Rubber Stow Bands to close the Deployment Bag.

When using Rubber Stow Bands pass the band under the T-4 tape and form a Lark's Head knot to secure it to the tape.

When using Elastic Stow Bands pull them through the #0 grommets using a piece of string or 5 cord thread.

Be sure to have a small washer before the knot to keep the band from passing through the grommet when using the Elastic Stow Bands .

Use a piece of string or 5 cord to pull the elastic band through the washer.

**Follow these Instructions when using the Semi-Stowless Main Deployment Bag.**

Pack the Parachute in the usual manner and close the Deployment Bag using the same method as a regular Deployment bag. (See Chp. 7.4.)

Open the Line Pouch and fold back the closing flap.

“S-fold” the lines back and forth placing onto the pouch. Leave about 18” unstowed.

Close the Pouch and tuck the flaps under to secure the lines.

The Deployment Bag is ready to be placed into the Main Container.
